Free Webinar

New Remediation Technology

You are invited to participate in a free webinar on Thursday, July 17 at 10:00 a.m., CDT, to learn about a relatively new remedial technology that has been successfully used to remediate petroleum-contaminated sites in Missouri, Kentucky and other states. The technology involves injection of a “trap and treat” product that provides immediate reduction in contaminant mass and longer-term enhancement of biodegradation.

Duane Guilfoil, P.E., AST Environmental, will explain this in-situ approach and present results from tank sites where it has recently been used. Missouri
