## Well Data Now Available On Line!

Great news! DNR's Division of Geology and Land Survey has recently posted its "Well Information System" on the web, making it *much easier* for consultants to find well records near tank sites!

The data can be accessed at  
<http://dnr.mo.gov/mowells/>.

No longer will you have to contact the Wellhead Protection Section, or use out-of-date information from MEGA. You now have direct access to information on all recorded wells in Missouri.

(Thank you, DGLS!)

## Evaluating the "Domestic Use Pathway"

When groundwater has been or is likely to be impacted by a petroleum release, you must assess the current and future risk of people using the water. Remember:

- You must first decide how many "groundwater zones" exist, then assess each zone.
- Your conclusions affect site characterization requirements, so include this in your initial site conceptual model.
- This evaluation is required *regardless of* whether land use is residential or non-residential.

- Initial conclusions can be modified as additional data are collected.

*Use Section 6.3 and Figure 6-2 of the RBCA Guidance for your evaluation.* (Pages 129 and 142 of the pdf file at <http://snipurl.com/pstif500>)

## Training

Excellent training for consultants – much of it free – is available here: <http://www.itrcweb.org/ibt.asp>.
